this book not only discusses cellular automata ca as accouterment for simulation but also the actual building of devices within cellular automata ca are widely used tools for simulation in physics ecology mathematics and other fields but they are also digital toy universes worthy of study in their own right with their own laws of physics and behavior in studying ca for their own sake we must look at constructive methods that is the practice of actually building devices in a given ca that store and process information replicate and propagate themselves and interact with other devices in complex ways by building such machines we learn what the ca s dynamics are capable of and build an intuition about how to engineer the machine we want we can also address fundamental questions such as whether universal computation or even living things that reproduce and evolve can exist in the ca s digital world and perhaps how these things came to be in our own universe
