Arising from the author's experience as a practicing CPA, this book is quite different from other research in this field as it confronts the subject of audit quality from a pragmatic perspective. The first goal of Jonas Tritschler is to develop an audit quality metric on national audit firm level. Financial reporting errors as detected by the German enforcement institutions during examinations, which subsequently are published in the German Federal Gazette by the involved companies, are the data basis for this measurement. Using the developed audit quality metric, the second goal of this study is to analyze audit quality differences of selected audit firms by comparing their deployed audit input factors such as employee's competence ratio of certified professionals to total audit staff, experience of employees, average tenure of employees in years, and client specific experience. Client fluctuation rate results indicate a correlation between audit quality according to the developed metric and the operationalized audit input factors mentioned above.

This selected issues paper examines the labor market and migration in Sweden. Sweden enjoys a broadly well-functioning labor market; the labor force has been expanding at a healthy pace, in part reflecting rising participation, including by females. This paper discusses the compositional changes in the labor force, employment, and unemployment over the past decade. A brief overview of migration flows, their composition, and their demographic benefits is provided. An assessment of the potential implications of the projected increase in migration for unemployment is done. The features of Sweden's labor market that contribute to the higher unemployment rates of the lower skilled and foreign born are also outlined.

The European economic crisis has been ongoing since 2008, and while austerity has spread over the continent, it has failed to revive economies. The media have played an important ideological role in presenting the policies of economic and political elites in a favourable light, even if the latter's aim has been to shift the burden of adjustment onto citizens. This book explains how and why, using a critical political economic perspective and focusing on the case of Ireland. Throughout Ireland is compared with contemporary and historical examples to contextualise the arguments. The book covers the housing bubble that led to the crash, the rescue of financial institutions by the state, the role of the European institutions, and the International Monetary Fund, austerity, and the possibility of leaving the Eurozone for Europe's peripheral countries. Through a systematic analysis of Ireland's main newspapers, it is argued that the media reflect elite views and interests and downplay alternative policies that could lead to more progressive responses to the crisis.
