over recent decades historians have become increasingly interested in early modern catholic missions in asia as laboratories of cultural contact this book builds on recent ground breaking research on early modern catholic missions which has shown that missionaries in asia cooperated with and accommodated the needs of local agents rather than being uncompromising promoters of post tridentine doctrine and devotion bringing together some of the most renowned and innovative researchers from anglophone countries and continental europe this volume investigates how missionaries entanglements with local societies across asia contributed to processes of localization within the early modern catholic church the focus of the volume is on missionaries adaptation to four ideal typical social settings that played an eminent role in early modern asian missions 1 the symbolically loaded princely court 2 the city as a space of especially dense communication 3 the countryside where missionary presence was only rarely permanent 4 and the household a central arena of conversion in early modern asian societies shining a fresh light onto the history of early modern catholic missions and the early modern eurasian cultural exchange this will be an important book for any scholar of religious history history of cultural contact global history and early modern history in asia chapter 8 of this book is freely available as a downloadable open access pdf at taylorfrancis.com under a creative commons attribution non commercial no derivatives cc by nc nd 4 0 license

the ethiopian eritrean federation a product of a united nations resolution came into existence in 1952 and was abolished ten years later the primary objective of this book is to examine the rise and the fall of the federation in the nght of present day realities this central theme is placed in context by a reconstruction of eritrean political organizations during the crucial postwar years the work includes a short account of the war between eritrean nationalist forces and the ethiopian government which led up to the emergence of eritrea as a sovereign state based primarily on archival sources at the public record office in london eritrea and ethiopia argues that no other group in the region has repeatedly succeeded in shaping its political destiny as the tigreans of eritrea have negash maintains that the federation was abolished by eritrean social and political forces rather than by ethiopia the un imposed federation together with its accompanying constitution were doomed to fail as these were foreign to eritrean and ethiopian conceptions of political power the attempts of the eritrean moslem league to defend and maintain the federation were frustrated by internal contradictions by the unionist party and by misconstrued perceptions of the division of powers between eritrea and ethiopia the author looks closely at the impact of the british period on eritrean society such an examination provides a better understanding of the background to the conflict and it is an important part of eritrean political and social history this book is the story of the slow but steady dissolution of the federation as seen and observed by the british diplomatic corps between 1952 and 1962 there were about thirty british nationals assigned to the eritrean government these expatriates kept in touch with the british consulate general whose responsibility was to protect the interests of british nationals as well as to report developments to london the conclusions and interpretations found in this book are to a great extent based on that documentation eritrea and ethiopia is the first study of its kind to follow the rise and fall of the federation it will be a challenging and insightful read for students of african affairs diplomatic historians policy studies scholars and political theorists

the subject of the emperor in the byzantine world may seem likely to be a well studied topic but there is no book devoted to the emperor in general covering the span of the byzantine empire of course there are studies on individual emperors dynasties and aspects of the imperial office role but there remains no equivalent to fergus millar s the emperor in the roman world from which the proposed volume takes inspiration for its title and scope the oddity of a lack of a general study of the byzantine emperor is compounded by the fact that a series of books devoted to byzantine empresses was published in the late twentieth and early twenty first centuries thus it is appropriate to turn the spotlight on the emperor themes covered by the contributions include questions of dynasty and imperial families the imperial court and the emperor s men imperial duties and the emperor as ruler imperial literature the emperor as subject and author and the material emperor including imperial images and spaces the volume fills a need in the field and the market and also brings new and cutting edge approaches to the study of the byzantine emperor although the volume cannot hope to be a comprehensive treatment of the emperor in the byzantine world it aims to cover a broad chronological

and thematic span and to play a vital part in setting the agenda for future work the subject of the byzantine emperor has also an obvious relevance for historians working on rulership in other cultures and periods

the sixth annual conference of the center for nonlinear studies at the los alamos national laboratory was held may 5 9 1986 on the topic nonlinearity in condensed matter lessons from the past and prospects for the future as conference organizers we felt that the study of non linear phenomena in condensed matter had matured to the point where it made sense to take stock of the numerous lessons to be learned from a variety of contexts where nonlinearity plays a fundamental role and to evaluate the prospects for the growth of this general discipline the successful 1978 oxford symposium on nonlinear soliton structure and dynamics in condensed matter springer ser solid state sci vol 8 was held at a time when the ubiquity of solitons was just beginning to be appreciated by the condensed matter community in subsequent years the soliton paradigm has provided a rather useful framework for investigating a large number of phenomena particularly in low dimensional systems nevertheless we felt that the importance of nonlinearity in wider arenas than solitonics merited a significant expansion in the scope of the conference over that of the 1978 symposium indeed many of the lessons are quite general and their potential for cross fertilization of otherwise poorly connected disciplines was certainly one of the prime motivations for this conference thus while these proceedings contain many contributions pertaining to soliton behavior in different contexts the reader will find much more as well particularly in the later chapters

the christian discovery of the babylonian talmud is a significant landmark in the long and complex history of anti jewish polemic while the talmudic corpus developed in the same period as early christianity this post biblical text was largely unknown to the christians full awareness of the talmud among christian authors did not arise until the late 1230s when the jewish convert nicholas donin presented a latin translation of talmudic fragments to pope gregory ix though the talmud was subsequently put on trial 1240 and burnt 1241 2 in paris the controversy surrounding it continued over the following years as pope innocent iv called for a revision of its condemnation the textual basis for this revision is the *Extractiones de Talmud* that is a latin translation of 1 922 talmudic fragments the articles in this volume shed new light on this monumental translation and its historical context they also offer critical editions of related texts such as donin's anti talmudic polemic authors of the contributions are wout van bekum piero capelli ulisse cecini enric cortès Óscar de la cruz palma federico dal bo alexander fidora göрге k hasselhoff moisés orfali ursula ragacs and eulàlia vernet i pons
