this book is the first academic work on the philosophy of engineering in china that reflects two decades of research it puts forward a new thesis namely that the core maxim in the philosophy of engineering is i create therefore i am which is radically different from the cartesian maxim i think therefore i am in addition the book offers the first detailed portrait of the roots and evolution of the philosophy of engineering in china the book begins by discussing the triptych thesis of science technology and engineering which argues that there are a number of important distinctions between the three e g scientific activities are chiefly based on discovery while technological activities center on invention and engineering activities focus on creation considering the latest developments in the philosophy of engineering the author also analyzes engineering communities engineering practice and a micro meso macro framework in subsequent chapters the author separately analyzes the three stages of engineering activities planning operating and using artifacts in the closing chapter two views on the philosophy of engineering as a new subdiscipline of philosophy and as a philosophy in its own right are briefly explained

this book is designed as a learning tool to help the aspiring engineer learn the language of engineering graphics in this regard this book is hardly unique as there have been literally hundreds of books published in the past that had a similar goal the main challenge faced by engineering graphics books comes from the difficulty of representing and describing three dimensional information on paper which is a consequence of the two dimensional nature of printed materials what makes this book invaluable is the use of augmented reality a technology that will allow you to escape the limitations of traditional materials enabling you the student to truly visualize the objects being described in full 3d to take full advantage of this book you will need a smartphone tablet or computer with a camera along with the apps provided many parts of the book are linked to specific augmented reality content through a series of black and white markers that have been seamlessly integrated throughout the pages in order to experience the content your device s camera must be pointed at these markers the main marker available at the beginning of the book is used to interact with the augmented reality models which will be rendered in real time in your devices s screen if you do not have an ios or android device or a computer with a webcam solidworks files of the models used throughout the book are available for download in addition stl files are available so the models can be opened using your solid modeling cad package of choice or printed using a 3d printer
