stm and sfm in biology is a book fully dedicated to biological applications of the new technology of scanning probe microscopy sx the scanning
tunneling microscope stm and its first off spring the scanning force microscope sfm resolve surface topography at the atomic scale they also detect
certain electronic and mechanical properties and perform well in ultrahigh vacuum ambient atmosphere and aqueous solution environments thus stm
and sfm offer powerful tools for biological investigations of nucleic acids proteins membranes and living cells introduces the reader to sxm presents
fundamentals of stm sfm and other sxms covers biological applications of stm and sfm describes experimental techniques that can be reproduced in

the laboratory contains extended bibliographies that guide the reader to detailed source publications

the functionalization of surfaces on the nanoscale is one of the most fascinating and at the same time challenging topics in science it is the key to tailoring catalysts sensors or devices for solar energy conversion whose functional principle is based on the interaction of an active solid surface with another liquid or gaseous phase as an example planar transition metal complexes adsorbed on solid supports are promising candidates for novel heterogeneous catalysts an important feature of these catalysts compared to supported metal clusters is the fact that the active sites i e the coordinated metal centers with their vacant axial coordination sites are well defined and uniform metalloporphyrinoids are particularly suitable in this respect because they combine a structure forming element the rigid molecular frame which often induces long range order with an active site the coordinated metal ion its planar coordination environment leaves two axial coordination sites available for additional ligands if adsorbed on a surface one of these axial sites is occupied by the underlying substrate the resulting electronic interaction with the surface can be used to tailor the electronic structure and thereby the reactivity of the metal center the remaining site is free for the attachment of molecules sensor functionality and or operates as a reaction center single site catalysis prototype examples are omnipresent in nature where in particular metallo tetrapyrrolys play a decisive role in important biological processes with the most prominent examples being iron porphyrins in heme magnesium porphyrins in chlorophyll and cobalt corrin in vitamin b12

scanning tunneling microscopy stm and atomic force microscopy afm are powerful tools for surface examination in the past many stm and afm studies led to erroneous conclusions due to lack of proper theoretical considerations and of an understanding of how image patterns are affected by measurement conditions for this book two world experts one on theoretical analysis and the other on experimental characterization have joined forces to bring together essential components of stm and afm studies the practical aspects of stm the image simulation by surface electron density plot calculations and the qualitative evaluation of tip force induced surface corrugations practical examples are taken from inorganic layered materials organic conductors organic adsorbates at liquid solid interfaces self assembled amphiphiles polymers this book will be an invaluable reference work for researchers active in stm and amf as well as for newcomers to the field

the impact of the economic downturn and the increase in financial scandals emerging from major corporations has generated a growing interest in governance issues and has emphasized the need for companies to be transparent in their dealings with shareholders and the markets although the issues in asia are fundamentally similar to those in the rest of the world there are some crucial differences in the way in which asian corporations acknowledge and confront these issues and in the political and legal frameworks under which they operate using examples of good and bad governance roche analyzes if the asian approach to governance issues is unique business and finance students as well as executives with an interest in asian business or corporate governance will find this an authoritative and insightful guide to this complex and important topic

the detailed and comprehensive presentation is unique in that it encourages the reader to consider different semiconductor lasers from different angles emphasis is placed on recognizing common concepts such operating principles and structure and solving problems based on individual situations the treatment is enhanced by an historical account of advances in semiconductor lasers over the years discussing both those ideas that have persisted over the years and those that have faded out

the first systematic reference on the topic with an emphasis on the characteristics and dimension of the reinforcement this first of three volumes authored by leading researchers in the field from academia government industry as well as private research institutions around the globe focuses on macro and micro composites clearly divided into three sections the first offers an introduction to polymer composites discussing the state of the art new challenges and opportunities of various polymer composite systems as well as preparation and manufacturing techniques the second part looks at macro systems with an emphasis on fiber reinforced polymer composites textile composites and polymer hybrid composites likewise the final section deals with micro systems including micro particle reinforced polymer composites the synthesis surface modification and characterization of micro particulate fillers and flakes as well as filled polymer micro composites plus applications and the recovery recycling and life cycle analysis of synthetic polymeric composites
