research and development in the field of high strength stainless steels appears to be directed along two principal paths 1 the development of alloys with improved strength properties and 2 the accumulation of information on the properties and physical metallurgy of existing alloys so that they may be used more effectively by and large the development of new alloys is being carried out by the stainless steel producers while the accumulation of property data for the most part is being undertaken on government contracts author

Vanadium Steels 1912

this report covers first results of work undertaken for the purpose of developing a method suitable for use in a cyclic production operation of recovering uranium and vanadium from alkaline carbonate leach solutions it was agreed that the initial plan of attack would make use of sodium amalgam to accomplish a reduction of the uranium and vanadium and attention has been directed initially to determining the maximum recovery of uranium and vanadium that can be obtained from carbonate leach solutions by reacting with liquid sodium amalgam maximum recoveries of 99 uranium and 98 vanadium were obtained it was found that the rate of reaction in respect to vanadium was appreciably increased by increasing the amount of sodium contacting the solution but the effect on recovery of altering this and other variables within practical and economic limits is the subject of further investigation considerable progress has been made in development of an experimental unit which will effectively contact solution with liquid amalgam and which also will form the basis and supply the necessary data for design of a full scale practical operating unit some investigation into the properties of sodium amalgams was made and work with solid as well as liquid amalgams is scheduled all amalgams used thus far have been prepared from metallic sodium and clean mercury the mercury cathode cell will be used in subsequent work analytical procedures equipment and apparatus specially required for this work have been set up and are described a review of pertinent unclassified literature is being carried on in connection with this work classified data or information was not available during the period of this report general observations and conclusions are given under that heading in the report
