**Super 10 Practice Sets for SSC CGL Mains (Tier II) Exam with 2 Online Sets** 2010-11-04 the area of automorphic representations is a natural continuation of studies in number theory and modular forms a guiding principle is a reciprocity law relating the infinite dimensional automorphic representations with finite dimensional galois representations simple relations on the galois side reflect deep relations on the automorphic side called liftings this book concentrates on two initial examples the symmetric square lifting from  $sl_2$  to  $pgl_3$  reflecting the 3 dimensional representation of  $pgl_2$  in  $sl_3$  and basechange from the unitary group  $u_{3,e,f}$  to  $gl_{3,e,f}$  the book develops the technique of comparison of twisted and stabilized trace formulae and considers the fundamental lemma on orbital integrals of spherical functions comparison of trace formulae is simplified using regular functions and the lifting is stated and proved by means of character relations this permits an intrinsic definition of partition of the automorphic representations of  $sl_2$  into packets and a definition of packets for  $u_3$  a proof of multiplicity one theorem and rigidity theorem for  $sl_2$  and for  $u_3$  a determination of the self contragredient representations of  $pgl_3$  and those on  $gl_3$   $e$  fixed by transpose inverse bar in particular the multiplicity one theorem is new and recent there are applications to construction of galois representations by explicit decomposition of the cohomology of shimura varieties of  $u_3$  using deligne s proven conjecture on the fixed point formula
